Summary

Open to Relocate: Cybersecurity Professional targeting a SOC Operations role with integrated exposure to Digital Forensics and Incident Response (DFIR). Built a strong foundation in security incident triage, phishing investigation, network monitoring, and SIEM analysis developed through security labs and hands-on training platforms, and personal projects. Proficient in core defensive tools including Splunk, Wazuh, Wireshark, and other OSINT tools. Driven to strengthen technical expertise in IOC enrichment, threat intelligence, malicious domain analysis, and digital risk protection.

Certifications

- **SAL1 -** SOC Professional Certification — **Pursuing**
- **CompTia Security+** — **Udemy**
- **SC-200**: Security Operations Analyst — **Microsoft**
- **AZ-900:** Azure Fundamentals — **Microsoft**
- **Google Cybersecurity Professional Certification** — **Coursera & Google**
- **Introduction to Cybersecurity** — **Cisco**

Technical Skills

SOC Operations: Phishing Analysis, Alert Triage, Threat Detection, Vulnerability Management, Product Security
Network Security: TCP/IP, Network Traffic Analysis, Network Monitoring, IDS/IPS, Log Analysis, Firewall, VPN
Security Tools & SIEM Platforms: Wireshark, Snort, Anti-Virus Tools, OSINT, Splunk, Wazuh, Elastic
Programming Languages: Python, PowerShell, SQL, KQL, HTML & CSS
Cyber Frameworks: Pyramid of Pain, MITRE ATT&CK, NIST Incident Response
Professional Skills: Incident Documentation, Effective Communication, Problem Solving, Analytical Thinking

Experience

Arista Networks — **October 2025 – October 2026**
Wi-Fi Security R&D Intern - WIPS — *Pune, Maharashtra*

- Contributed to a multi-OS WPA3 client prevention mechanism pipeline for WIPS, supporting wireless security and system integrity.
- Benchmark-tested Multi-Link Operation (MLO) behavior and security feature compliance across commercial-off-the-shelf (COTS) devices.

Techmihirnaik — **May 2023 – July 2023**
Cyber Security Intern — *Remote*

- Performed network reconnaissance using Nmap to identify hosts, enumerate open ports, and discover exposed services for attack-surface assessment.
- Assessed web application security using Burp Suite, identifying SQL injection vulnerabilities in a login workflow.

Education

Narsee Monjee Institute of Management Studies — **July 2020 – May 2025**
MBA.Tech (Integrated B.Tech in Computer Engineering and MBA in Finance) — *Navi-Mumbai, Maharashtra*

Projects

High-Fidelity Televisory Emulation & Behavioral Analysis | *SIEM, Cyber Kill Chain, Log Analysis* — **Active**

- Designed and engineered a lightweight, containerized security testing architecture to build a telemetry simulation framework for defensive validation, preserving the complete integrity of the Cyber Kill Chain.
- Programmatically modeled the exact mathematical and structural trail that a real attack leaves behind by injecting realistic background network noise interleaved with high-fidelity adversary indicators.

The KingPhisher-Man | *Python, Windows, Gmail API, OSINT* — **Active**

- Engineered an automated phishing investigation system that monitors Gmail inboxes and extracts email headers, URLs, attachments, and IP addresses for multi-layered threat analysis.
- Correlated domain reputation, DNS, and file analysis data to generate security risk scores, accelerating typosquatting detection and brand protection for precise, verdict-based remediation within mail flows.

Wazuh Event Analysis Monitoring | *Wazuh, FIM, Windows-11* **2026**

- Configured Wazuh monitoring on a Windows VM to capture and investigate authentication events, including successful and failed login attempts, using Windows Security Event Logs.
- Implemented File Integrity Monitoring (FIM) on a designated Windows folder by configuring Wazuh rules to detect file creation, modification, and deletion events, supporting identification of unauthorized file changes.

Security+ Labs | *Fundamentals* **2026**

- Conducted structured security assessments, password analyzer tool for credentials assessment, data-leaks, Digital Risk Protection (DRP) and static malware analysis across isolated lab environments to identify vulnerabilities and assess structural architecture risks.
- Utilized OpenVAS for network vulnerability scanning, analyzed system logs for security events, validated website certificate chains, and restricted cross-VM traffic using Linux UFW rules.
- Discovered, mapped, and documented publicly exposed assets associated with authorized domains, including subdomains, DNS records, IP addresses, and services for attack surface management.

Practical SQL Injection | *SQL, OWASP Top 10* **2023**

- Executed database queries through SQL CLI and assessed web applications for practical SQL injection vulnerabilities.
- Tested targeted SQL injection payloads against a controlled lab environment using Burp Suite.

Extra Curricular

Practical SOC and Network Security Lab | *Splunk, Snort, Log Analysis* **TryHackMe**

- Used Splunk search queries to examine network telemetry associated with data exfiltration over FTP, DNS, and ICMP to investigate traffic patterns and document malicious findings.
- Captured network traffic to analyze Snort logs for investigation of SSH brute-force attempts and reverse-shell activity while testing and configuring IDS/IPS rules for detection of suspicious network behavior in a controlled environment.

Patent

Arista Networks **Pre-Registered**
Wireless Intrusion Prevention System *Pune, Maharashtra*

- **Patent Applications**: 3
- **Targeted Operating Systems**: Windows, iOS, macOS
